

## Bird Data Analyst Challenge

Birds require periodic maintenance, and we need to build a business plan to deliver it.

We'll provide you with a CSV file that has the ride history for a group of Birds in Los Angeles. Each row has a flag saying whether or not maintenance was required after the ride was completed, as well as other metadata about the device, user, and ride.

Please put together a recommendation for a maintenance program. Take as long as you need, but ideally you shouldn't have to spend more than an hour or two to finish.
